

Using the eBook Pro Viewer

Viewing eBooks

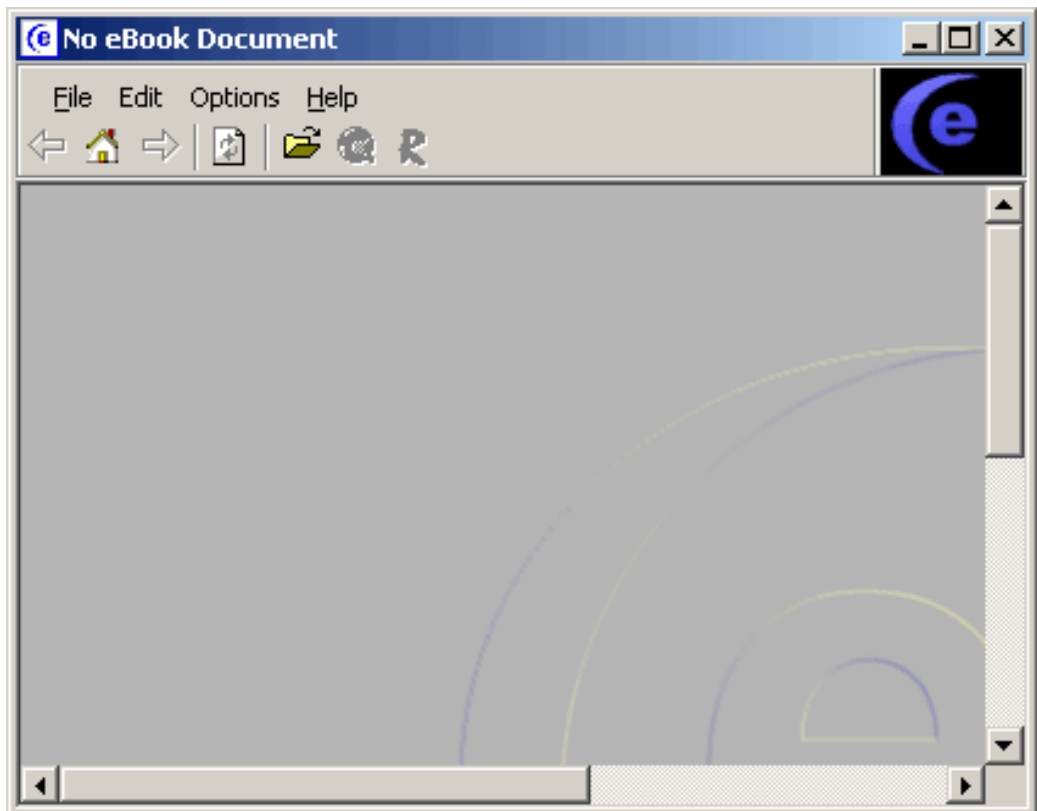

Drag & Drop Method

You may view eBooks (files with .ebk extensions) by dragging and dropping the .ebk file (eBook) onto the "eBook Pro Viewer v3.0.exe".

File-Type Association Method (AKA Double-click Method) * RECOMMENDED

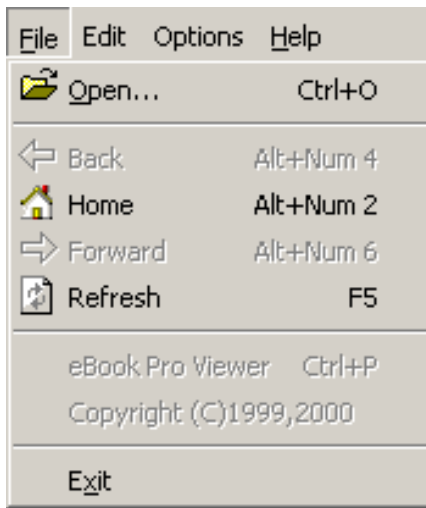

Once you install the viewer, a file-type association is automatically set. This means that whenever you double-click on an eBook (.ebk file), the viewer will automatically launch and open that eBook. This will enable users to easily view multiple eBooks, simply by double-clicking the filename.

Viewer Overview

File

Menu Overview

Open

Selecting this will allow you to search your computer for other eBook (.ebk) files.

Back, Home and Forward

You can navigate the eBook by using the buttons on the toolbar, by using keyboard commands to move back and forward, and by selecting the specific commands from the "File" menu. Use whichever is easiest for you.

Print and Print Setup

These functions are the same as in any other normal "Windows-based" program. Select "Print" to print your document, or "Print Setup" to define your printer settings.

NOTE: The "Print" command will be greyed out if **we** have not "Enabled" Printing in your eBook, which can be on request of the author. See the "Registration Center" section for more information on how to use this.

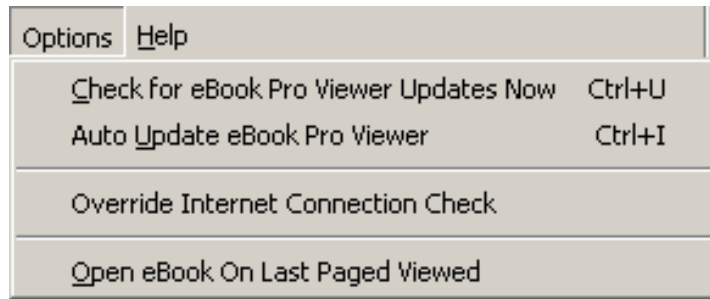

Exit

Select this in order to "Exit" the program.

Tool Bar

Selecting this option will Display/Hide the "Tool Bar" which contains the navigation and Print

Options Menu Overview

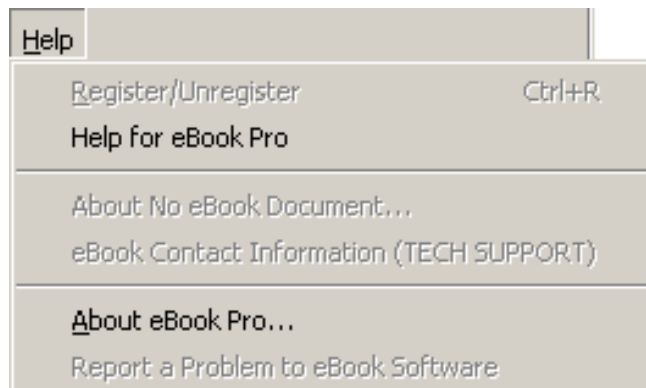

Check for eBook Pro Viewer Updates Now

Selecting this option will force the viewer to check for viewer software updates through the internet. If an update is found, you will have the option to install it.

Auto Update eBook Pro Viewer

Selecting this option will give the viewer permission to automatically check for viewer software updates during viewer use. This option is completely invisible unless an update is found. In that case, you will have the option of installing it..

Help Menu Overview

Register/Unregister

Select this in order to Register or Unregister your eBook Publication on the current computer.

About this eBook

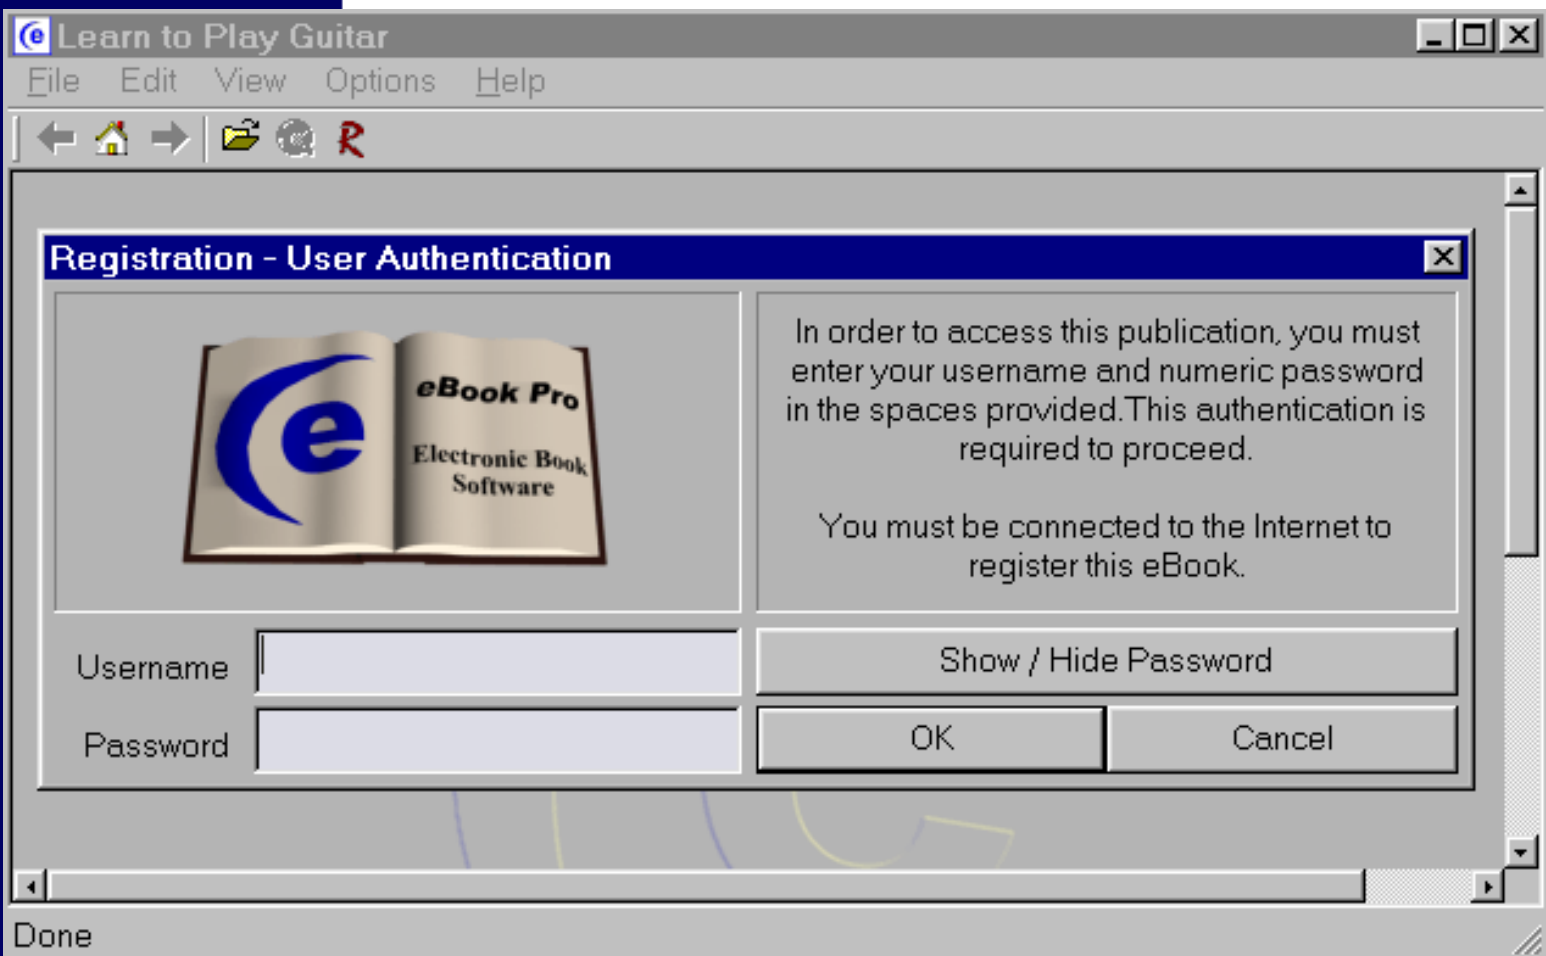

This option will say "About <your eBook name>...". If you have placed an "AdminBM.BMP" Bitmap file in your HTML Root directory, this menu option will be active and users will be able to view this bitmap when this menu option is selected.

About eBook Pro

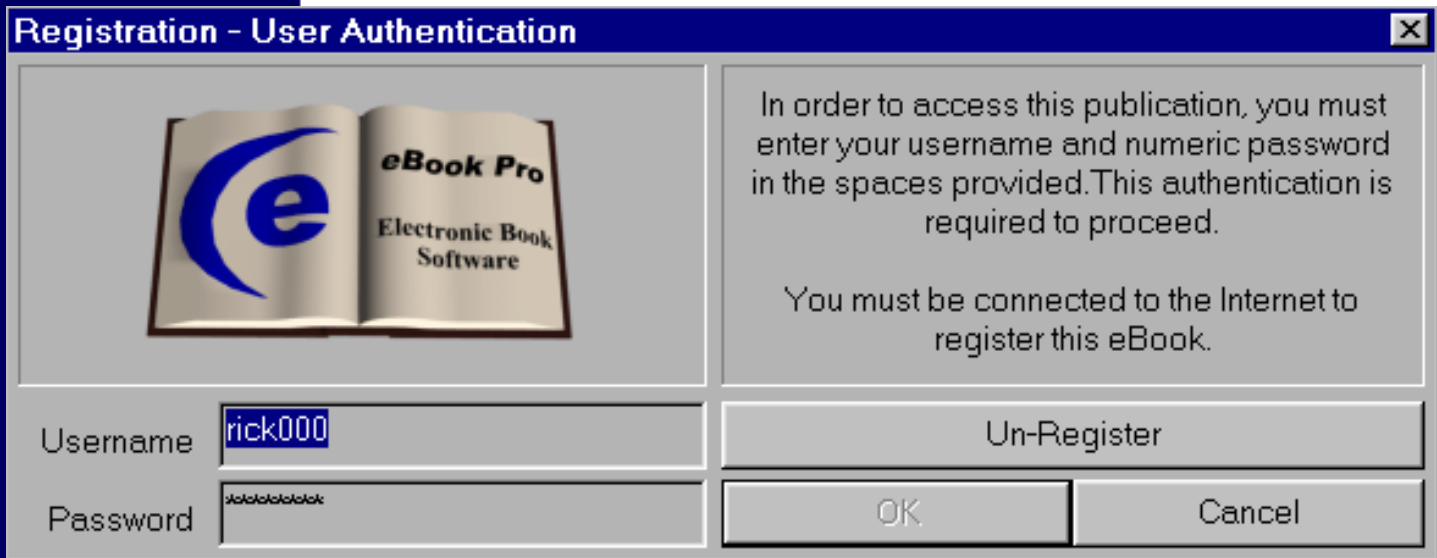

This will provide information on the Internet Marketing Center® and will explain how you can get more information about how to create secure documents.

Registering an eBook

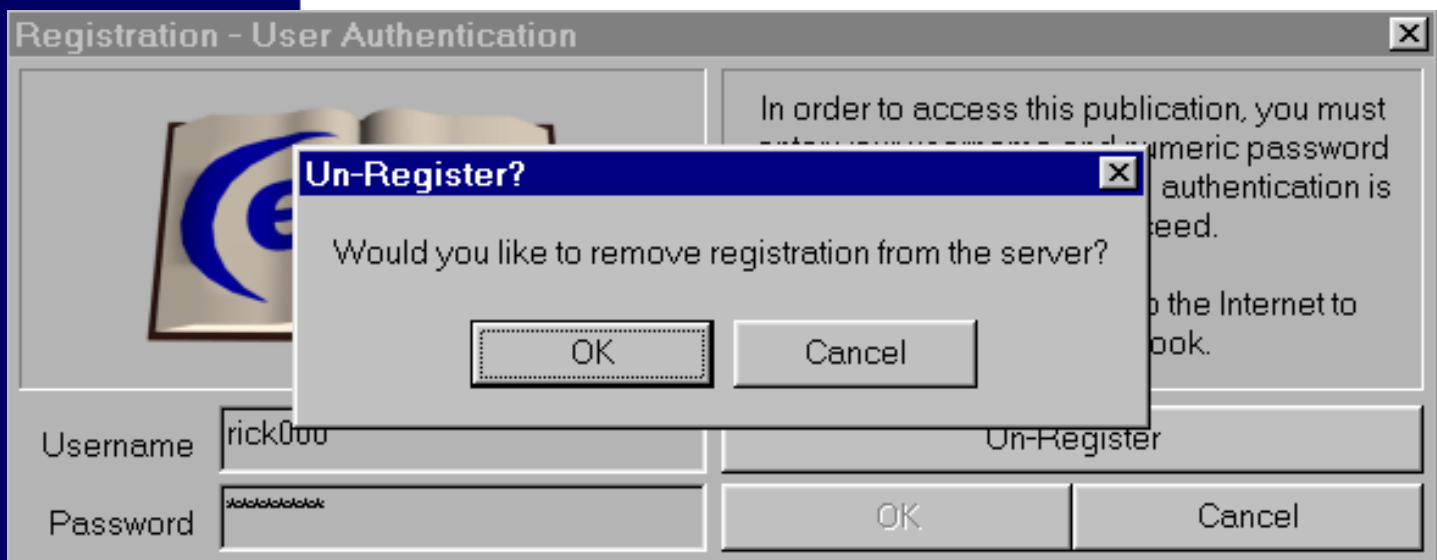

To begin viewing an eBook, the user must enter an activated username and password in the Registration Login box. You can bring up the Login box by selecting "Register/Unregister" from the "Help" menu, or by clicking anywhere inside the viewer. You must be connected to the Internet to register.

Unregistering an eBook

To unregister an eBook, the user must select "Register/Unregister" from the "Help" menu, and select "Unregister" from the Registration Login box.

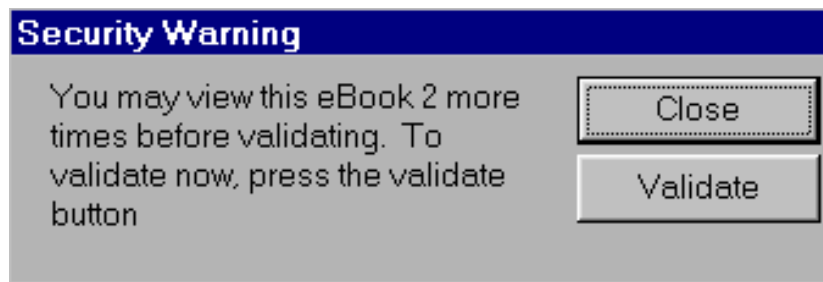

You will then be asked if you want to remove your Registration from this computer. If you select "Yes", your registration will be removed from our database, and the software will be set to "reregister the next time it is run."

A dialog box will appear to confirm that the registration has been removed from the server. Please note that to unregister, you must be connected to the Internet.

eBook Validation Checks

Periodically, the viewer will require that you connect to the Internet (if you are not already) so that the eBook may confirm that its registration is still valid.

When it is nearing time for a check, a "Validation" box will appear upon initial startup of the viewer. To force a check and reset the time until the next check (this is useful if you will be away from an Internet connection and wish to use the viewer), select "Validate" from the dialog box.
